

Walkthrough

Credit Card Management

Credit Card management:

This feature available from affiliate/node (branch) levels.

1 PRESS FOR CREDIT CARD

Credit card configuration:

The system is connected to multiple payment gateways. In essence, any branch can be configured to work with different payment gateway or have different settings applies to it.

Payment receiver - is set for accounting purposes - so it is clear whether the funds are processed to the main company (Affiliate) or to the branch. This allows for better tracking and reconciliation.

The systems allow to set charges for credit card payments - meaning that while the final result price won't be affected, on checkout the customer is notified about those credit card processing fees. It's possible to configure the fees to apply only in case where Cash payment is available. Check the **commission on credit card only**, box & set the **commission** field on the requested amount (in percentage).

2 CREDIT CARD CONFIGURATION

The screenshot shows a 'Credit card preferences' configuration window. It contains a table with the following columns: 'Credit Card', 'Payment receiver', 'Commission on credit card only', and 'Commission'. The 'Commission on credit card only' column has checkboxes, and the 'Commission' column has percentage input fields with up/down arrows. The 'Save' button is orange and the 'Cancel' button is blue. A '*Inherited' label is present near the 'Cancel' button.

Credit Card	Payment receiver	Commission on credit card only	Commission
Visa	AuthorizeNet Test	<input checked="" type="checkbox"/>	10.00 %
MasterCard	AuthorizeNet Test	<input type="checkbox"/>	
AmericanExpress	--Not allowed--	<input type="checkbox"/>	
Diners	--Not allowed--	<input type="checkbox"/>	
Discover	AuthorizeNet Test	<input type="checkbox"/>	
Eurocard	--Not allowed--	<input type="checkbox"/>	
Maestro	--Not allowed--	<input type="checkbox"/>	
JCB	--Not allowed--	<input type="checkbox"/>

Expiration Date CW

User Credit card settings:

1. **Can user take credit card payment** - Controls if a user is allowed to process credit cards (in accordance with Credit card settings in Branch/Node)
2. **Credit card fail recovery** - This feature allows to save bookings that would otherwise be rejected in case of credit card failures. For example, a payment for a hotel is not authorized, and usually, such booking wouldn't be created. This feature allows to create a booking with provider, as long as it is "X" days before start of cancellation policy and is bigger than "Y" price value. You can later then get hold of the customer and collect payment in alternative way, but already have the room and price secured with the provider. This feature works only on NET accounts & refundable packages. The order status on such scenarios will be "PE".
3. **Disable rollback on CC payments** - Will not reverse Authorization made on credit cards in cases where the supplier confirmation fails.

4 CREDIT CARD USER SETTINGS

The screenshot displays the 'User Settings' interface, which is organized into three main sections: Hotels, Flights, and Cars. Each section contains a set of configuration options. In the Hotels section, the 'Can user take credit card payment' checkbox is checked and highlighted with a red box. The 'Credit card fail recovery' section is also highlighted with a red box, containing fields for 'Number of days before CXL' (set to 0), 'Min package price in USD' (set to 0.00), and a 'Disable rollback on CC payments' checkbox. The Flights and Cars sections also have their 'Can user take credit card payment' checkboxes checked and highlighted with red boxes. The interface includes a blue header with a close button and an up arrow, and a search icon in the top left corner.

User Settings

Hotels

Default Search Currency: US Dollar (USD)

Disable rollback on CC payments

Flights

Default Search Currency: US Dollar (USD)

Search timeout (sec): 30

Output best packages

Can user take cash payment

can user book non refundable deals

Can user take credit card payment

Cars

Default Search Currency: US Dollar (USD)

Search timeout (sec): 30

Output best packages

Can user take cash payment

can user book non refundable deals

Can user take credit card payment

Another feature "**Book before credit card authorization**" – means that the booking process is done before getting the credit card authorization, this feature works only on suppliers NET account & when the package is refundable. If booking process completed successfully but the authorization of the credit card company is failed – the order will be cancelled automatically. If the cancellation wasn't successful, then the order status will be changed to "ER", in order to let you know that something went wrong during the booking process.

5 RESERVE BOOKING FLOW

The screenshot displays the 'Operational Settings' interface. At the top, there is a blue header with a wrench icon and the text 'Operational Settings'. Below this, several sections are visible:

- TripAdvisor Review:** Includes a checkbox for 'Allow review' and a text input field for 'Url'.
- Notifications:** Includes a dropdown menu for 'Method' (set to 'None') and a text input field for 'Url'.
- Auto re-book:** Includes a checkbox for 'Enable auto re-book' and a spinner control for 'Rebook delta' (set to 0%).
- Dynamic Markup:** Includes dropdown menus for 'Markup type' (set to 'None') and 'Output filter type' (set to 'None'). It also features spinner controls for 'Parity price delta' (set to 1.00) and 'Amount below market price' (set to 0%), with 'EUR' indicated next to the parity price delta.
- Tax:** Includes a checked checkbox for 'Enable Fake tax' with the note '(Enabled on 'Carsolize Main')'.
- Discount:** Includes a checked checkbox for 'Discount absorber'.
- Reverse booking flow:** This section is highlighted with a red box and contains a checkbox for 'Book before credit card authorization', which is currently unchecked.
